Title page

Title. Sensor degradation and maintenance-trigger errors in remaining-useful-life prediction intervals: a C-MAPSS stress test

Article type. Original Research Article

Journal. Proceedings of the Institution of Mechanical Engineers, Part O: Journal of Risk and Reliability

Author. Yi Wang
College of Engineering, Lishui University, Lishui 323000, Zhejiang, China
ORCID: 0009-0003-3433-4981
Corresponding author: Yi Wang; e-mail: `jefflsxy@lsu.edu.cn`; telephone: +86 13757838533

Keywords. remaining useful life; prediction intervals; uncertainty quantification; sensor degradation; maintenance decision; C-MAPSS

Code and data.
Public repository of this paper (code, checkpoints, result files, analysis and table-generation scripts): `https://github.com/jeff-1980/paper2-JRR`
The earlier analysis on which it builds is the tag `v1.8-submission` (commit `00d1482`) of `https://github.com/jeff-1980/rul-interval-reliability`.
C-MAPSS: NASA Prognostics Center of Excellence.

Acknowledgments. The AI assistant Claude (Anthropic) assisted with analysis code, text editing and consistency checks; see the generative AI declaration below.

Statements and Declarations.
Ethical considerations: Not applicable; public simulated dataset, no human or animal subjects.
Consent to participate: Not applicable.
Consent for publication: Not applicable.
Declaration of conflicting interest: The author declared no potential conflicts of interest with respect to the research, authorship and/or publication of this article.
Funding statement: The author received no financial support for the research, authorship and/or publication of this article.
Generative AI: Claude (Anthropic) was used to help write and run analysis code, restructure and edit the text, and check numbers against result files; the author verified all outputs and takes full responsibility.
Data availability: C-MAPSS is available from the NASA Prognostics Center of Excellence. Code, checkpoints, result files and table-generation scripts: `https://github.com/jeff-1980/paper2-JRR`.

Submission history. A previous version of this work, with a different title, was submitted to IEEE Transactions on Reliability (manuscript TR-2026-1741) and returned on 9 October 2026 with the editor's decision that the manuscript was not appropriate for that journal; no scientific or technical criticism was given. The decision text is archived by the author. The manuscript is not under consideration elsewhere.
